3. Operational Cost & Infrastructure Evidence (COGS)

All development and simulation activities were hosted on **Google Cloud Platform (GCP)**. During July 2026 testing, total operational costs were governed at **€34.92 (~\$38.00 USD)** through our **Compute-to-Rework Ratio (CRR)** engine and Cloud Run scale-to-zero autoscaling:

- **Google Vertex AI & Gemini API:** €33.01 (\$36.00 USD) for 4.5M+ tokens across Gemini 3.6 Flash, Gemini 3.1 Pro, and Gemini 3.5 Flash.
- **Container Registry & Cloud Storage:** €1.83 (\$2.00 USD) for Artifact Registry container image storage.
- **Google Cloud Run Compute:** Incurred €0.08, fully offset by standard GCP Free Tier credits (€0.00 net).

4. Commercialization Roadmap & Tiered SaaS Pricing

Commercial monetization activates with V1.0 targeting small engineering teams via 4 subscription tiers: **Free Hobby** (\$0/mo, 1M simulation tokens), **Starter** (\$9.99/mo, 5M tokens), **Pro** (\$49.99/mo, 25M tokens), and **Enterprise** (\$99.99/mo, 100M tokens). A transparent *Three-Gate* overage model protects small businesses from unexpected token billing surprises.
