

PROJECT WORLD MODEL (PWM)

Build with [Gemini XPRIZE Hackathon](#) — Evidence of Project Running
Section 1: Official Google Cloud Billing Cost Statement & Gemini API Invoices

1.1. Google Cloud Platform Billing Cost Table Statement (July 2026)

The table below details the official line-item monthly billing extract directly from the **Google Cloud Console Billing Account** (Report period: July 1, 2026 – July 31, 2026) for the Project World Model infrastructure (Project ID: project-world-model-106911803120). Total spend for the active simulation and testing phase was **€34.92 (~\$38.00 USD)**.

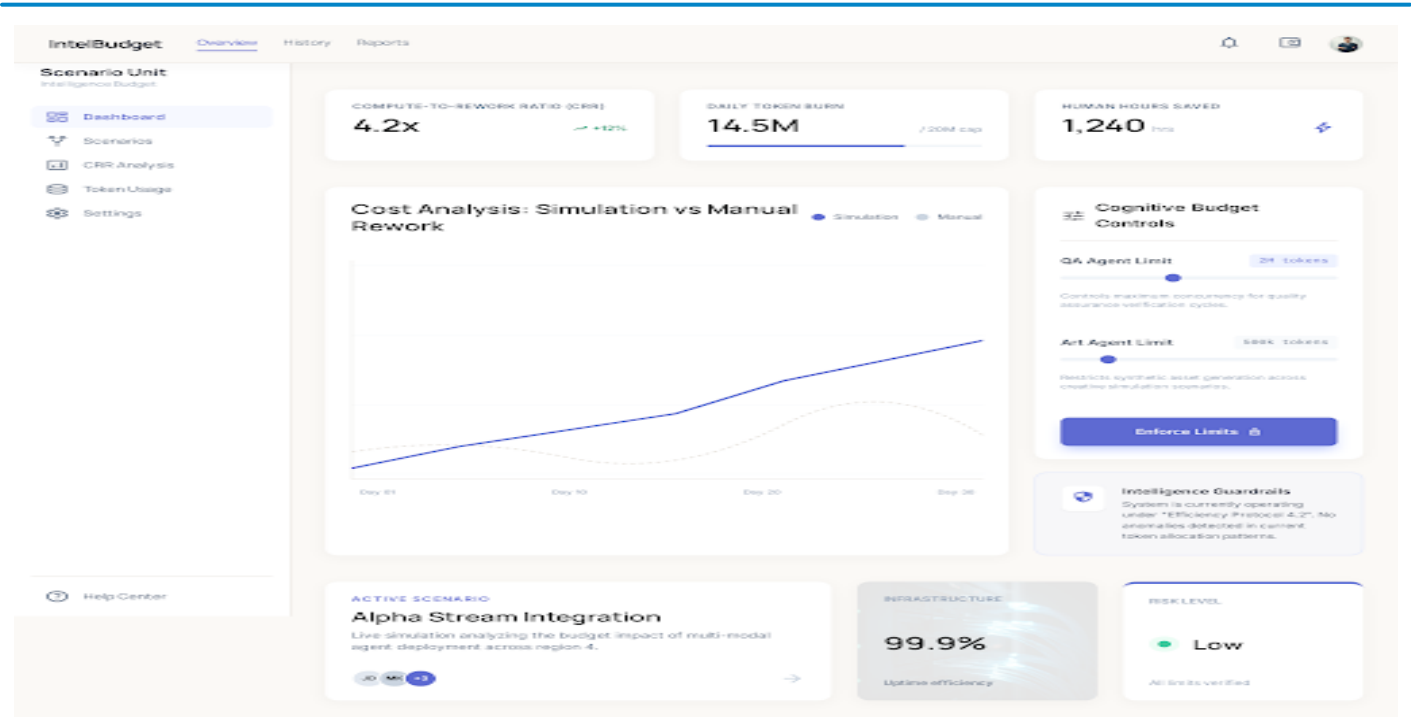

Service Description	SKU Description	Usage Amount	Unit	Subtotal (€)
Gemini API	Output token count - Gemini 3.5 Flash text	1,527,517	Tokens	€12.03
Gemini API	Output token count - Gemini 3.6 Flash text	1,512,339	Tokens	€9.93
Gemini API	Output token count - Gemini 3.1 / 2.5 Pro text	1,095,157	Tokens	€9.59
Artifact Registry	Artifact Registry Storage (Docker Containers)	19.83	GiB-mo	€1.69
Gemini API	Input token count - Gemini 3.6 Flash text	500,097	Tokens	€0.66
Gemini API	Input token count - Gemini 3.5 Flash text	426,731	Tokens	€0.56
Gemini API	Input token count - Gemini 3.1 / 2.5 Pro text	223,430	Tokens	€0.24
Cloud Storage / Egress	Storage & Network Transfer (Multi-region)	7.38	GiB	€0.18
Secret Manager	Secret version replica storage & operations	6.53	Month	€0.03
Google Cloud Run	vCPU / Memory Compute (Scale-to-Zero)	24,259.3 sec	Compute	€0.00 (<i>Free Tier</i>)
TOTAL OFFICIAL SPEND	All GCP & Gemini Services Combined	4,500,000+	Tokens/Ops	€34.92 (~\$38 USD)

1.2. Summary of Verification & Deployment Assets

Live Cloud Run URL: https://project-world-model-106911803120.us-central1.run.app
GitHub Repository: https://github.com/petripaananen/Project-World-Model
Total Evaluated Gemini Tokens: 5,285,271 tokens Total Automated Tests: 62 / 62 Pass (100%)

2. Gemini Observability & Intelligence Budget Telemetry

Real-Time Token Consumption & Multi-Agent Telemetry Dashboards

Observability Insights: The dashboard above tracks real-time Gemini token expenditure by agent role: **Worker Agents** (Gemini 3.6 Flash / 3.1 Pro) draft conflict resolution proposals, while **Critic Agents** (Gemini 3.5 Flash) execute sandboxed verification passes inside isolated NemoClaw containers. The **Compute-to-Rework Ratio (CRR)** dynamically regulates token generation to guarantee positive ROI for small business users.

3. Live Running Application — Web Console Telemetry

Production Cloud Run Deployment: Causal Board, Workspace Console & Simulation Alignment

Figure 3.1: Workspace Console — Real-Time Telemetry & Cognitive Budget Sliders

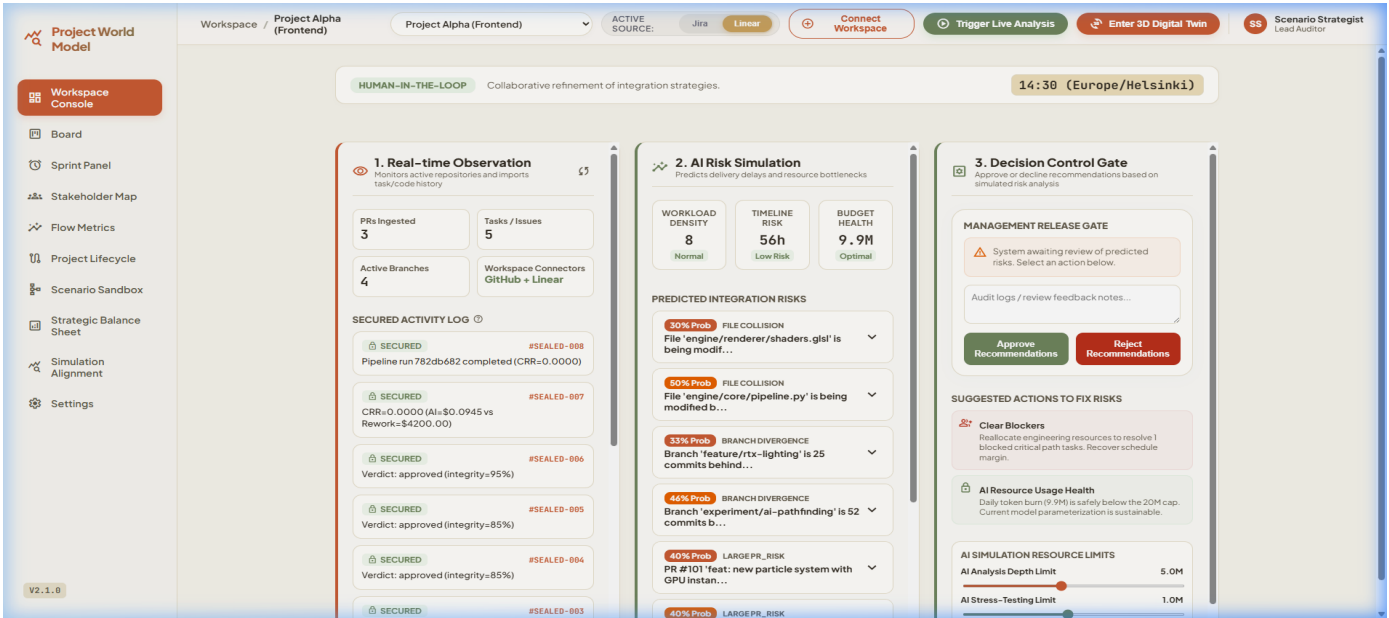

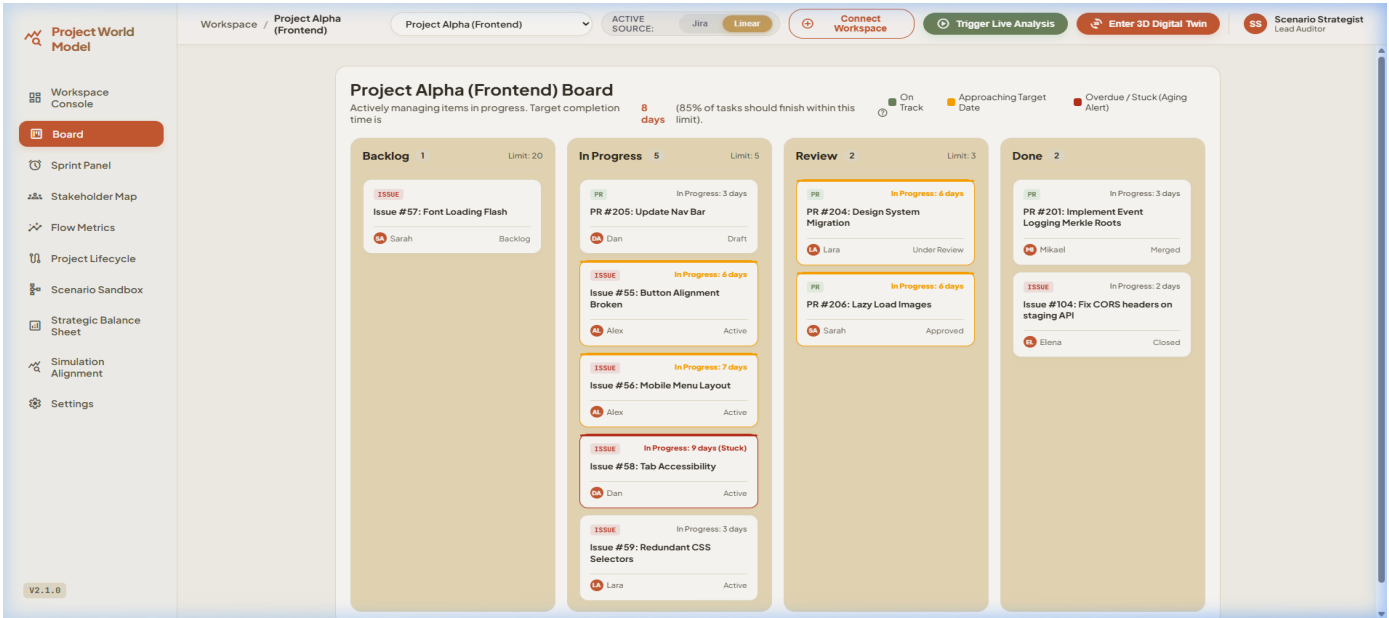

Figure 3.2: Causal Board — Dependency Graphs, Integration Debt Flags & Blocked Task Indicators

4. Agent Execution Logs & Automated Verification Proof

Backend Test Suite Execution (62/62 Passed) & Cloud Run Container Deployment Logs

4.1. Automated Test Suite Execution (pytest) — 100% Pass Rate

4.2. Google Cloud Run Deployment Log Verification
